The Sound of Physics

Sounds play a vital role in our lives, even though we often don't pay much attention to them. It can be surprising how sounds are produced, which factors affect what kind of sounds instruments make or why can the same musical notes sound so differently to our ears. Fortunately, with the help of today's technology students can easily investigate even on their own.

SCAN ME

With homemade instruments the students can create their own band without significant musical knowledge to experience the joy of playing music together too. Our goal is to show how this can be done with music and different musical instruments in focus.

How can we apply it in a classroom?
The task is the same as for every musician, stay tuned!
