Flying Paper

Why can't paper fly? There are different ways to make paper fly that keep kids entertained and let them learn something. How to make swallow, parachute, plane, boomerang, paper rocket or otherwise flying paper?

Man wanted to fly since ancient times. We are still trying to do it with more or less success. For the dimensions of a school, a classroom, a room, human flying is unattainable. That's why we at least let fly various objects. Some objects, that is. Like paper. It's readily available, relatively inexpensive and can be used to do incredible things. We can even make it fly. It doesn't matter what we start with. Whether it's a paper airplane, a boomerang or an airplane. And how do you go from kindergarten to world championship? Just get going and don't let go.
